

1. High-Level Config Overview

Total configs tested : 109,874

Available (redirecting): 874 (0.8%)

Unavailable : 109,000 (99.2%)

Datacenter exits : 592 (67.7% of working)

Blacklisted exits : 496 (56.8% of working)

Config Overview (n=109,874)

Exit Node Type — Working Configs (n=874)

2. Protocol Availability Table

protocol	total	available	avail_%
vless	80470	600	0.7
trojan	18416	113	0.6
ss	7346	62	0.8
vmess	3478	64	1.8
hysteria2	152	35	23.0
socks	6	0	0.0
tuic	5	0	0.0
ssr	1	0	0.0

Protocol Breakdown

Protocol — Total vs Available (count)

Protocol — Availability Rate (dark green $\geq 10\%$ | amber 0.5-2% | red $< 0.5\%$)

Latency Distribution — Datacenter vs Residential Exits

Exit Node Characteristics (among all redirecting / working configs)

Top Failure Reasons (non-redirecting configs)

3. Top Failure Reasons (non-redirecting configs)

error	
Host unreachable	45071
Timeout	32880
SSL handshake failed	16018
xray failed to start	14999
hysteria2 failed to start	15
curl error 60	6
curl error 18	5
SOCKS proxy error	4
sing-box failed to start	1
curl error 97	1

Top 15 Exit Node Organizations (ISP / Hosting)

6. Exit IP Risk Profile — Datacenter x Blacklist

Exit IP risk breakdown (working configs):

DC + Blacklisted	384	(43.9%)	median latency: 1415ms
DC only	208	(23.8%)	median latency: 1612ms
Res + Blacklisted	112	(12.8%)	median latency: 1010ms
Clean Residential	170	(19.5%)	median latency: 1554ms

Exit IP Risk Profile — Datacenter × Blacklist

Exit IP Profile — 4 Risk Categories

Median Latency by Risk Category

Latency Distribution (capped at 5000ms)

Latency by Protocol (outliers hidden)

Working Configs by Latency Bucket

9. Telegram Channel Analysis

```
Working configs total           : 874
Working configs with @channel  : 237  (27.1%)
Unique @channels                : 69
```

Top channels by working config count:

channel	
@oneclickvpnkeys	44
@meliproxyy	23
@chillguy_vpn	15

Top Channels — Datacenter Exit Rate

10. Full Summary Table

Total configs tested	109874
Available (redirecting)	874
Unavailable	109000
Availability rate	0.8%
Datacenter exits	592
Residential exits	282
Blacklisted exits	496
Datacenter rate (of working)	67.7%
Unique exit IPs	500
Unique exit countries	47
Avg latency (working)	1955 ms
Median latency (working)	1472 ms
Fastest config	183 ms

11. Security Profile — Summary Stats

```
Working configs                : 874
Proxy-detected by ip-api.com  : 445   (50.9%)
IPv6-capable exits            : 201   (23.0%)
IPv6 leak (country mismatch)  : 32    (15.9% of IPv6-capable)
```

```
dns_resolver_ip : empty — SOCKS5 routes DNS server-side; edns.ip-api.com requires
                  EDNS client subnet, which most VPN proxy servers do not send.
x_forwarded_for  : empty — SOCKS5 is layer-4 and does not modify HTTP headers.
```

Security Profile — Working Configs

Proxy Detection
(ip-api.com queried through proxy)

IPv6 Support

IPv6 Leak
(exit country differs from IPv4)

Security — Protocol Breakdown

Proxy Detection Rate by Protocol
(high = exit IP is in ip-api.com proxy DB)

IPv6 Support Rate by Protocol

11b. Security Metrics by Exit Type

Type	Count	Proxy-det%	IPv6%	Blacklist%
Residential	282	45.7	23.0	39.7
Datacenter	592	53.4	23.0	64.9

Top 10 Countries with IPv6-capable Exit Nodes
